

ABSTRACT OF THE DISCLOSURE

A lawn sprinkler comprises a connection pipe, and a spray angle adjustment structure mounted at one end of the connection pipe and formed of a circular distribution member, an adjustment member and a control member. The control member is actuated to turn by the adjustment member such that one or more of a series of arcuate rims of the control member block one or more of a series of arcuate through holes of the circular distribution member, thereby resulting in the sprinkling of water in various patterns.
